

In the United States, summer has always represented our most carefree season—a time to explore the world around us by day and night! Being in and around water is a huge part of summer in Florida. Helping young children identify our water use and how we can conserve and renew it for everyone’s use and enjoyment, is a great summertime lesson!

These are pictures of the characters in the book Silly Sally. Sally and her friends were out on a summer’s day, each getting to town in a different way.

1. Print and cut out the pictures.
2. Tape each character on a stick or on a block.
3. Have a puppet show!

### Math Activity

#### Summer Measuring Fun

**Summer Measuring Fun**

(Continued from Page 1)

What household items are most often used during the summer? Brainstorm with your child and then have your child select small items which represent “summer.” Put these items on a table and using a box of 1 inch paperclips (the small ones), have your child place them end to end in line with the item. How many paperclips did they count? This will give your child a visual sense of approximately 1 inch. Explain that an inch is a unit of measurement. Have your child write the number down. Which item is the longest? Shortest? Introduce a ruler, yardstick or soft tape measure if you have one.

**Hot Summer**

(Tune of: Farmer in the Dell)

In the summer it is hot.  
 In the summer it is hot.  
 I (like to eat ice cream),  
 In the summer when it's hot.

Take turns singing about the different activities you and your child like to do in the summer.

For example:

- I (like to eat ice cream).
- I (like to read a fun book).
- I (put on lots of sunscreen).
